AUTOMATIC CHAR BROILER
MODEL 1424 GAS - "B" Series

OWNER'S MANUAL

IMPORTANT: RETAIN THIS MANUAL IN A SAFE PLACE
FOR FUTURE REFERENCE.

FOR YOUR SAFETY:

Do not store or use gasoline or other flammable vapors or liquids in the vicinity of this or any other appliance.

WARNING: Improper installation, adjustment, alteration, maintenance can cause property damage, injury, or death. Read the installation, operating and maintenance instructions thoroughly before installing or servicing this equipment.

Broiler area must be kept free of combustible materials, and the flow of combustion and ventilation air must not be obstructed. Operating personnel must not perform any maintenance or repair functions. Contact your Facilities Maintenance Department.

In a prominent location, post instructions to be followed in the event the user smells gas. This information shall be obtained by consulting your local gas supplier.

A. GENERAL SPECIFICATIONS

Model 1424 Gas

THE STAR CHAR FOR CARL'S JR.®

Carl's Jr.

AUTOMATIC CHAR BROILER

MODEL 1424G

MODEL 1424 AUTOMATIC CHAR BROILER

Configured exclusively for the Carl's Jr. system, the Model 1424 includes accessories and features that are proprietary and unique for Carl's' Jr. product needs.

MODEL 1424G SPECIFICATIONS:

- Single 22" broil belt
- Natural gas, propane, or electric
- Broil belt extension
- Extended product guides
- Enhanced bun grill speed
- Split bun platen
- 3" W.C Gas for low pressure
- 5" W.C. Gas for high pressure
- Automatic Temperature Control (ATC)
- #50 Main burner orifices
- 2:30 Cook time (approximate)
- Carl's Jr. Chicken reverberators

OPTIONS:

- Carl's Jr. Tubular stand (design for Carl's only)

Model 1424G SPECIFICATION DRAWINGS

DIMENSIONS	INCH	MM
Length	44 1/4	1124

B. INSTALLATION

PRE-INSTALLATION

Uncrate the broiler, and inspect for shipping damage. Contact the factory if there is obvious damage. Remove the tape securing the machine parts, and install the parts in their proper location. Refer to the Parts and Location section of this manual. If you find concealed damage to any part of this unit, contact your freight carrier immediately. The factory warranty does not cover freight damage.

MOUNTING

If the broiler was shipped with a tubular stand, refer to separate tubular stand assembly instructions.

Note: The four legs of the broiler stand are equipped with casters. Always set the brakes on the casters to prevent the broiler from shifting during operation or cleaning.

LEVELING

Make sure that the broiler is level. Factory stands are equipped with adjustable casters.

HOOD REQUIREMENTS

This appliance must be installed under a ventilation hood of adequate size and capacity:

Model	CFM	CMH
1424	800	1360

The hood should be at least 6" (152MM) larger in all dimensions than the appliance top, and be 12" to 18" (305MM - 457MM) above the top. Do not obstruct the flow of combustion and ventilation air. An adequate air supply must be available for safe and proper operation.

Note: See the National Fire Prevention Association booklet on ventilation of cooking equipment. Write to: NFPA, 470 Atlantic Ave., Boston, MA 02210. Local codes on venting must also be complied with.

CLEARANCE

For proper installation, the minimum clearance from combustible and non-combustible construction is 6" (152MM) from the back and 6" (152MM) from the front of the machine. Keep appliance area free from combustibles.

To facilitate disassembly and service of the unit a minimum of 24" (610MM) should be allowed on the control panel (right) side of the broiler, as well as in front of the broiler.

GAS CONNECTION

At rated BTU capacity, the gas supply should deliver a pressure of at least 6" water column at the broiler connection for natural gas, and 11" water column for propane gas. Incoming gas supply pressure must not exceed 14" water column for either type of gas.

The appliance was shipped from the factory ready for gas supply hook-up to the shutoff valve under the broiler. For disconnect, a manual valve must be located in the gas supply line upstream from the connector.

If the machine is installed on a moveable stand; (1) the installation shall be made with a connector that complies with the Standard for Connectors for Moveable Gas Appliances, ANSI Z21.69-1987, and Addenda, Z21.6a-1989, and a quick disconnect device that complies with the Standard for Quick-Disconnect Devices for Use With Gas Fuel, ANSI Z21.41-1989, and (2) adequate means must be provided to limit the movement of the appliance without depending on the connector and the quick-disconnect device or its associated piping to limit the appliance movement. (See figures on page 6.)

Note: Appliance installation must conform with all local codes, or in the absence of local codes, with the National Fuel Gas Code ANSI Z223.1-1988. Check all fittings for gas leaks, including pilot tubing and inlet connections as soon as the appliance is connected to the gas supply.

Note: This appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.45 kPa).

Note: This appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.45 kPa).

In Canada, installation shall be in accordance with CAN/CGA-B149.1 Natural Gas or CAN/CGA-B149.2 Propane Gas, and local codes where applicable.

By public initiative, the State of California has adopted legislation (Proposition 65) which requires manufacturers of many types of products, including gas appliances, to warn consumers of their products that contain chemicals or produce substances listed by the State of California to either cause cancer, birth defects, or other reproductive harm.

WARNING: If not installed, operated, and maintained in accordance with the manufacturer's instructions, this product could expose you to substances in fuel, or from fuel combustion which can cause cancer, birth defects, or other reproductive harm.

ELECTRICAL CONNECTION

Power requirements are stated on the unit nameplate and must be connected accordingly. Before starting broiler, tighten all electrical connections in control box. An electrical diagram is located inside the control box.

Note: This appliance must be electrically grounded in accordance with local codes or in the absence of local codes, the National Electrical Code, ANSI/NFPA No. 70-1990. In Canada, in accordance with the Canadian Electrical Code CSA 22.1 part 1, or local codes.

WARNING: This appliance should be connected with a four-pronged grounding plug for your protection against shock hazard. Be sure to plug directly into a properly grounded four-prong receptacle. Do not cut or remove grounding prong from plug.

Note: This appliance cannot be safely operated in the event of a power failure. No attempt should be made to operate during a power failure. Disconnect power supply before servicing.

PRE-OPERATION CHECK

Be sure that all parts are installed in the proper location. Refer to **OPERATION** section for lighting procedure. Start broiler and test for proper operation.

INSTALLING GAS APPLIANCE CONNECTORS AND FLEXIBLE GAS LINES CORRECTLY

For safety in the kitchen area, and to insure maximum service life, it is vitally important to correctly install connectors.

In order to avoid sharp kinks or excessive bends that could have a damaging effect on the connector, it may be necessary to attach pipe elbows in order to bring the connector into its proper plane. For easy movement of the appliance, the connector should be installed with a "lazy" loop for minimum tension.

Note: Gas appliances should be disconnected prior to maximum movement. (Minimal movement is possible to connect hose.)

WRONG

Avoid sharp bends and kinks when pulling equipment away from wall.

RIGHT

Minimum pull of equipment is permissible for accessibility to quick disconnect device.

RESTRAINING DEVICE INSTALLATION AND USE

This high strength restrainer is to be used with all moveable (castered) appliances. It fully complies with American Gas Association requirements. References: Z21.69, Z83.11, and Z21.41 with current revisions. Installation is quick and positive. In Canada, device is in accordance with CAN 1-6.9-M70 Quick Disconnect Devices for use with gas fuel, and CAN 1-6.10-88 metal connectors for gas appliances.

Correct length for any appliance is simply a matter of loosening two adjuster clips (1) and re-tightening. (3" to 6" shorter than appliance connector is desired length.)

Restrainer is made of heavy duty steel cable, with a strong scissor hood (2) at one end, and an equally strong spring hook (3) at the other. Cotter pin (4) is supplied to secure the installation.

FIGURE 2

IMPORTANT: This Restraining Device should be ordered with every connector for Movable appliances.

C. OPERATION

Controls and Indicators

GAS SYSTEM CONTROLS

1. Main Gas Pressure Regulator.
Controls the gas pressure when the High Gas is off.
2. High Gas Pressure Regulator.
Controls the gas pressure in High Gas mode.
3. Main Gas Solenoid Valve.
4. High Gas Solenoid Valve.
5. Manual Gas Valve.
Valve is open when in line with pipe.

WARNING: Use extreme caution when making adjustments to the gas pressure regulator. Only authorized personnel should open the control box.

STEP-BY-STEP LIGHTING PROCEDURE

Before lighting, make sure that all parts are installed in the proper location, all controls are turned off, and the ventilation hood fan is turned on.

1. Turn on Main Power Switch.

2. Turn on Motor Switch.

3. Set Motor Speed Control knob to desired setting.

4. Set the Bun Platen Thermostat to the desired setting. (Use a setting of 475° F to start.)

5. Open the Manual Gas Valve. The valve is open when the handle is in-line with the pipe.

6. Push and hold the Red Push Button Valve. This will start the flow of gas to the pilot lights. While holding in the Red Button, push the Ignitor button on the front of the control box. After the pilot lights, hold the Red Valve in for 30 seconds to allow the thermocouple to heat. When you release the Red Push Button, the burners should ignite. If the ignitor is not working, use a long-stem lighter to manually light the pilot.

7. After lighting the broiler, check the gas pressure to be sure it is adjusted to the levels stated on the machine rating plate. Allow the broiler at least 40 minutes to warm up.

SHUTDOWN PROCEDURE

For **EMERGENCY** shutdown, turn off the Main Power switch and shut off the manual gas valve.

For **PLANNED** shutdowns - Clear machine of all food products. Allow the machine to run empty for 15 minutes in order to burn off the residue on the belt. Allow the machine to cool with the meat belt running, before you disassemble. Turn Main Power and Motor switches off.

CAUTION: Turn all appliance switches off before disconnecting cord from power supply.

AUTOMATIC TEMPERATURE CONTROL (ATC)

The Nieco Automatic Temperature Control (ATC) is a system that operates the broiler at two different energy input rates; a high energy input for initial warm-up and periods of high volume, and low energy for regular operation. This dual input rate and the ATC allow the broiler to operate at a very consistent temperature throughout the day and thus provide a very consistently broiled product. Since the broiler will remain on the lower input rate (low gas) most of the day, a substantial energy savings is realized.

The ATC consists of two gas pressure regulators piped in parallel, a solenoid valve in series with the high gas pressure regulator, a probe to sense the temperature at the loading end of the broiler, and a control unit which is operated by the signals from the probe. The control unit causes the solenoid valve to open and close. When the valve is open, the machine is in high gas mode, and the gas pressure is increased to heat up the broiler.

Under heavy product loads, the temperature sensed by the ATC probe will drop low enough to cause the ATC to open the solenoid valve. When the solenoid valve opens, the amber indicator light on the control panel will light. The ATC will keep the broiler on high pressure until the temperature sensed by the probe returns to the calibrated setting.

CALIBRATING THE ATC

1. Loosen the control knob lock screw and set the ATC control knob to 600° F.
2. Turn on the Main Power Switch.
3. Turn on the Motor Power Switch.
4. Light the broiler following the procedure in this manual.
5. The broiler should be in high gas mode at this time. (Amber light on.)
6. When the broiler reaches 600°, the high gas will shut off, and the broiler will be in low gas.
7. 40 minutes after lighting the broiler, **slowly** turn the ATC control knob up (clockwise) until the high gas clicks on. This is the idle temperature of the broiler.
8. As soon as the high gas turns on, slowly turn the ATC down (counter clockwise) 10° to 20° below the point where the high gas turns on.
9. Tighten the control knob lock screw to prevent accidental movement.
10. The control knob setting may need a minor adjustment on the first day of use, in order to maintain 10° to 20° below the normal idle temperature. Once the adjustment is correct, it need not change from day to day unless the broiler operating conditions change.

WARNING

Never set the ATC control knob at a setting high enough to keep the broiler in high gas pressure. The machine may be damaged, energy costs will be much higher, and some broiler parts may wear out prematurely.

TYPICAL CARL'S JR. ATC TEMPERATURES

The following are the results of ATC Temperature Setting tests. Tests were performed on the 824B/1424 Carl's Jr. broiler with 2" pressure difference between high and low. Note: These are as run at Nieco Corporation and can be expected to vary according to individual store conditions. These temperatures should be indicative of store temperatures, but not actual:

FOR NATURAL GAS:

1. #50 Orifices:	Low Pressure	High Pressure	ATC Temperature
	2"	4"	735°
	2.5"	4.5"	745°
	3"	5"	790°
	3.2"	5.2"	820°

FOR L.P.G. (PROPANE):

2. #57 Orifices:	Low Pressure	High Pressure	ATC Temperature
	7"	10"	715°
	7.5"	10.5"	725°
	8"	11"	770°
	8.2"	11.2"	800°

Note: ATC temperature is the dial temperature, not the set point, which should be about 15° lower.

CARL'S JR. BROILER SETUP CHART

Start at 2:30 and adjust as needed after product temperature checking and verification.

MODELS 1424/824 & 1124 BELT TIMES AND LINKS PER MINUTE

<u>Time</u>	<u>Model 1124</u>	<u>Models 824/1424</u>
2:15	22.8 LPM	22.8 LPM
2:30	20.5 LPM	20.5 LPM
2:45	18.6 LPM	18.6 LPM
3:00	17.1 LPM	17.1 LPM
3:15	15.7 LPM	15.7 LPM

Gas Settings:

Low	4.25" W.C.	3" W.C.
High	4.25" W.C.	5" W.C.

Note: Gas settings are as set at the factory, subject to adjustment at time of start-up and broiling performance verification.

Broil time is travel time of product from the center line of the feed end shaft to the center line of the discharge end shaft.

BUN GRILLING PLATEN

The 1424 is equipped with independently adjustable dual bun grilling platens. The clearance of each platen is adjusted by turning the black handles located directly above the platens, at the feed end of the machine. Frequent adjustment should not be necessary. The recommended initial setting for the bun platen is 475°.

CARL'S JR. PRODUCT TEMPERATURE STANDARDS

Meat patties:	160° MINIMUM
Chicken patties:	165° MINIMUM
Steak Sandwich	160° MINIMUM

Set the broil times so that all meat and chicken products are cooked above the minimum temperatures. Always be certain to check the product temperature frequently. These are the current Carl's Jr. product specifications as of 8/98. Always check with management personnel to be certain that proper Carl's standards are maintained.

D. ASSEMBLY/DISASSEMBLY AND CLEANING

If this appliance is connected to the gas supply by a flexible gas line and quick disconnect coupling, it must also be connected to a restraining device (see installation instructions). If the appliance is moved and then returned to its original position, it must be reconnected to the restraining device and the casters locked before resuming operation.

1. Clear machine of all food products. Allow the machine to run empty for 15 minutes in order to burn off the residue on the belt. Allow the machine to cool with the meat belt running, before you disassemble. Turn Main Power and Motor switches off.

2. Remove the Side Panels by lifting up and off. Wipe clean with a degreaser.

FROM THE FRONT OF THE BROILER

3. Remove the Patty Feeder by lifting up and out. Clean daily using soap and water.

4. Remove the Upper Disposable Burner Front Reflector, and clean with soap and water.

5. Remove the Grease Pan by sliding it out the front. Clean daily using soap and water.

6. Remove the Belt Scraper. Notice the position it sits in before removing, so that you can replace it properly. Clean daily using soap and water or degreaser.

7. Scrape the shafts (axles) with the special tool provided, or with a flat head screwdriver.

FROM THE LEFT SIDE OF THE BROILER

8. Remove the Grease Chute and Grease Box, and clean using soap and water.

9. Remove the Burner Access Cover.

9

10. Slide the Lower Disposable Burners out and remove the Protective Shields.

Clean the shields by scraping off any built up residue, then soak in soap and water.

CLEAN THE SHIELDS DAILY.
This will help prolong the life of the disposable burner and keep the broiler cooking properly.

10

FROM THE BACK OF THE BROILER

11. Remove the awning by lifting up and off. Clean using soap and water.

11

12. Remove the Patty Discharge Pan and Insert. Clean daily using hot soapy water, and sanitize.

12

13. Remove the Stripper Blade (Doctor Blade). Scrape any built up residue from the blade. Clean by soaking in soap and water. Sanitize.

13

14. Remove the Lower Burner Reflector. Notice the position of the piece before removing it, so that you can re-install it properly. Clean by soaking in soap and water.

14

APPROVED CARL'S JR. CLEANING TOOLS

BURNER/MEAT BELT BRUSH
CKE # 70351

SMALL ORIFICE BRUSH
CKE # 70357

MEAT BELT SHAFT CLEANING TOOL
CKE # 70352

VENTURI BRUSH
CKE # 70358

WEEKLY CLEANING

15. Remove the Lower Disposable Burners through the access hole in the side of the broiler.

Clean the Distributor Screen and Venturi in the same fashion as the Upper Burners. Refer to instruction 16 below.

15

16. Remove the Upper Disposable Burners and clean as follows:

16

- A. Remove Reverberator and clean with a stiff bristle brush.

- B. Clean Distributor Screen with a stiff bristle brush.

- C. Clean Disposable Burner Venturi with a stiff bristle brush.

REPLACE REVERBERATOR AT THE FIRST SIGN OF BREAKAGE.

HOLD DISPOSABLE BURNER WITH THE SCREEN FACING DOWN WHILE BRUSHING.

This prevents particles from dropping down and lodging inside the burner.

HOLD DISPOSABLE BURNERS SO THAT PARTICLES WILL NOT DROP INSIDE.

DO NOT SOAK OR SUBMERGE THE DISPOSABLE BURNERS IN WATER. WATER CAN DAMAGE THE DISPOSABLE BURNER, CAUSING IMPROPER BURNER PERFORMANCE.

17. Wipe off the frame and other internal parts of the broiler. Do not spray anything (i.e. clinging degreaser) inside the broiler.

WEEKLY CLEANING

18. From the exterior of the manifold, wipe the area around the orifices with a clean towel.

18.

19. Using the Orifice Brush, carefully clean ALL orifices.

19.

CAUTION: NEVER CLEAN BURNER ORIFICES WITH ANYTHING OTHER THAN THE APPROVED BRUSH, (ie. PAPER CLIP, TOOTHPICK etc...) AS THE ORIFICE WILL BE DAMAGED. THIS WILL CAUSE IMPROPER BURNER OPERATION AND WILL AFFECT THE PERFORMANCE OF YOUR BROILER.

E. CONVEYOR BELT REMOVAL

Before beginning, notice the way the belt runs through the broiler. Also notice the direction the knuckles face. Be sure to re-assemble in the same way.

1. Run belt until the Master Link is near the front idler shaft.

2. Lift shaft and Teflon Blocks up, and slide the blocks out.

3. Unhook the Master Link.

To reassemble, reverse the procedure. Be sure to reassemble the belt with the knuckle opening facing away from the direction of travel.

F. CONVEYOR BELT TENSION

Maintain proper tension on the conveyor belts to prevent jamming. Bearing spacers (pictured below) are supplied with the broiler to make minor tension adjustments. Major tension adjustments are made by removing a link or links from the belt.

The diagram on the left shows the spacer in the stored position. The diagram on the right shows the spacer behind the teflon bearing tightening the belts.

Belt tension should be checked monthly. To do this, allow the machine to cool, then grip the idler shaft at each end and pull on it. If the shaft and bearings move $\frac{3}{16}$ " or more, the spacers should be placed behind the bearings to tighten the belts. If the spacers are already behind the bearings, return them to the stored position and remove a link from the conveyor belt.

BROIL BELT PROBLEMS

Interference with stripper blade:

The most common belt problem to be expected is the physical interference of the belt with the stripper blade. This is caused by bent or warped rods on the meat belt, and can be fixed by replacing the rods that are causing the problem. Other causes are bent stripper blades, or utensils jammed in the belt.

Blocked belts:

When trouble shooting drive problems, it is important to ensure that the belt is not being blocked. To do this, detach the drive chain and turn the meat belt by hand. The belt, with the motor detached, should turn freely and easily. If the blockage has occurred which is preventing the belt from turning, the blockage should be removed before the drive chain is re-attached. The drive chain can be easily removed from the drive sprocket (on the motor shaft) by loosening the mounting bolts and raising the motor.

NOTE: Restaurant employees are NOT to remove the meat belt. Only Facilities Maintenance Personnel are authorized to remove this belt.
